As a business leader, you make decisions about risk every day: which project do you tackle first, how do you address your next case, what partnership you enter; even how you spend your budget. But your ability to secure your network is based on your ability to manage risk, so you must be able to identify, evaluate, and prioritize the risks and vulnerabilities inherent in your technology, processes, and members of your own staff. A risk assessment of your environment by Conversant Group can assist your organization by:

- Evaluating the effectiveness of your information and physical security controls.
- Quantifying and controlling your risks; identifying the firm’s risk tolerance & residual risk.
- Organizing & simplifying your compliance requirements and client questionnaire responses.
- Monitoring & systematically managing (mitigate, accept, transfer, or avoid) risks.

If you do not have the expertise to setup a risk management program, we have your back. Our experienced and certified staff can evaluate the existence and effectiveness of your control environment based on the FAIR (Factor Analysis of Information Risk) method. Since risk does not stop with a report, we can also assist you to manage, monitor, and control those risks programmatically while being time and cost-effective. We can even help you communicate up the chain to enable (and fund) real, sustainable change.

**Cyber Security Assessments**

Overwhelmed with requests for security responses from clients & leadership? We can quantitatively assess the maturity of your control environment, including:
- User Provisioning & Authentication
- Policies & procedures
- Data Protection
- Physical & Environmental Security
- Continuity of Operations

**Infrastructure Assessments**

Do you have the right technology infrastructure to support your firm? Working with 5-year-old tech is hard; let us help evaluate and make the case by assessing your environment, including:
- Compute & Storage
- Network & Routing
- Virtualization
- Staffing & Budget allocation
